Position Title	Senior Developer
Department/Team	Development
Location	MindAtlas Office
Reports To	Development Team Lead

General Accountability

Reporting to the Team Lead in the Development Team, the Senior Developer is responsible for the development, maintenance and support of LMS platforms.

Objectives

- Create LMS solutions that meets all our client's requirements and exceeds their expectations.
- Support junior Developers in their development and day to day tasks.

Primary Responsibilities

- Interpret client requirements and develop high level solutions.
- Development of technical documentation (functional requirements and technical architecture).
- Develop application features to written technical specifications.
- Test developed code.
- Resolve application issues.
- Solve complex problems, including platform performance and architectural configuration & optimisation.
- Estimate development effort and produce delivery plans.
- Provide input into the application roadmap.
- Work with and manage client stakeholders.
- Work collaboratively with team members.
- Other IT related tasks that are required.

Education and Experience

- Minimum 5 years' experience developing with PHP and using MVC frameworks.
- Working knowledge of solution design.
- Strong knowledge of best practices for code structure, testing and performance.
- Experience working with integrating third-party platforms through APIs or flat files.
- Strong knowledge of code versioning tools such as GIT.
- Strong working experience of Relational Databases (queries, design and normalisation).
- Experience with accessibility and security compliance.
- Strong working experience with front-end technologies, including JavaScript, HTML5 and CSS3.
- Experience in cloud server management and maintenance highly desirable.
- Excellent communication skills and attention to detail.
- English as a primary language.
- Ability to converse and liaise with client teams.
- Positive, can-do attitude is essential.
- Willingness and desire to take ownership of tasks.
